

Tool Upgrading Session

Audrey Karabinus

9/15/2003

Audrey set up five work stations for a hands-on session.

Bill Smith brought several tools for sharpening chisels and other tools.

Audrey brought a honing guide for setting a chisel on an angle.

Many technicians neglect tool maintenance, trying to do one more job with things as they are.

There is a work station for making things out of brass, such as agraffes, tool handles, string nudgers, etc.

Soundboard duster table using heat-shrink coating to prevent scratching the sound board.

String hook making with bass strings.

Jack alignment tappers: trace the original onto the wafer and cut one from a wood wafer, then insert a brass rod. Trace, draw, duplicate the samples on the table.

There are instructions and samples on each table.
